How to park your car

Most people might not be aware sometimes on how to properly park a car, especially when parking along side the road.

Sometimes accident happened even when a car is at park and not moving at all, safety measures must be practice to avoid a much bigger problem in the event that an accident happened.

Safe parking procedure must be taken into consideration.

When parking a car always apply both, the parking brake and the shift lever must be placed in an appropriate gear position for manual transmission, or placed in P (Park) position for automatic transmission. This is to secure the car from rolling unexpectedly which in turn will result into an accident.

When a car is headed downhill with a curb, turn the wheels toward the curb and move the vehicle forward until the side wheel touches the curb.

When a car is headed uphill with a curb, turn the wheels away from the curb, move the vehicle backward until the side tire touches the curb.
